12th May 2012: Sutton Park, Birmingham

Green Hairstreaks are now flying. Also present were many *Adela reamurella*, *Brimstones* and *Peacocks*.

The two pictures below show the effect of longer lens choice. The telephoto shot was taken with the help of a monopod. Both were at F14.

Green Hairstreak, 55mm.

Green Hairstreak, 190mm.
